

# Tali Decking FSC®

Tali decking is a durable, stable, long-lasting outdoor decking product imported from West Africa. It is an environmentally friendly alternative to Ipe and Cumaru and is the preferred decking of choice in many European countries.

Tali has an appealing mahogany-like grain character. The structure of the wood is very uniform without any distinctive markings.

This beautiful and abundant wood is harvested using responsible forest practices as it is one of the few decking hardwoods to carry FSC® certification.

*A lasting, durable solution...*
