## About White County Mouldings

At White County Mouldings, we know that you are buying more than moulding when you select our products. You're choosing exceptional quality, professional expertise and decades of manufacturing experience.

We specialize in serving the needs of building products distributors, millwork and cabinet manufacturers, flooring distributors, architects and designers, custom cabinet makers and and fixture manufacturers. As both a wholesaler and manufacturer, White County Mouldings is one of the largest producers of specialty mouldings in the Southeast.

We carry our commitment to excellence to extraordinary levels with a fully integrated process that allows us to control quality from rough green lumber to custom mouldings. We operate our own kiln drying facilities and process our own mouldings in our moulding plant in Cleveland, Ga. This highly integrated production process affords us the ability to price our mouldings competitively while delivering the highest quality mouldings and services in the market.

In addition to our collection of architectural-grade mouldings, we have access to an extensive inventory of more than 100 different species of domestic and exotic lumber through our affiliated lumber drying yards.

## Value-Added Capabilities

Our specialty is custom-order mouldings, which are available in a broad variety of domestic and exotic species. With more than 1,000 different moulding profiles to choose from, chances are we have what you are looking for. If not, bring us an existing sample, a CAD drawing, sketch or photograph. Our expert craftsmen will match it to exacting standards. We cut our own knives and look forward to adding your profile to our expanding collection.

---

# MOULDING

---

Among our millwork services we offer:

- Stock and Custom Mouldings
- Custom Flooring and Paneling
- Finger-Joined Products
- Straight-Line Ripping
- Optimized Defecting
- Optimized Gang Ripping
- Edge and Face Gluing
- End-Matching
- In-House Tooling
- Veneer-Wrapped Mouldings\*

\*Our veneer-wrapped mouldings are produced by our strategic partner, Contact Industries, a worldwide leader in engineered wood products.

## What You Need to Know

- Unless specified, architectural profiles are 6' or longer. All solid mouldings are sold in random lengths of 3' to 16'. All plank flooring is sold in random lengths of 3' to 16'. Finger-joint and veneer-wrapped mouldings are available in lengths up to 20'. Specified lengths require a premium and prior approval.
- Over-runs of up to 10% will be shipped and billed.
- Claims due to shortage or damage must be filed within 10 days of receipt.
- Custom orders may not be returned for cash or credit.
- Merchandise approved for return is subject to a 20% restocking charge. Customer is responsible for freight on all returns.
- Returned merchandise must be in good, salable condition.

## Environmental Commitment

In choosing us, you get more than top quality hardwood products. You share in our commitment to a renewable wood resources and responsible forest stewardship. We are a multi-generational company with a long-term vested interest in sustainable forestry. With greater forest management and long-term stewardship, we know better wood can come from our forest resource. Decisions we make today will impact the overall health and quality of future timberlands.

While wood is inherently green, we also recognize that third-party certification is important in maintaining public confidence. Our affiliated distribution group, Hardwoods Incorporated, has had multi-site Forest Stewardship Council (FSC) chain-of-custody certification since 2005. This certification allows all five of our distribution centers to handle FSC-certified products through the supply chain. Our scope covers the purchase, sale and distribution of lumber, plywood, veneer, panel products and mouldings. White County Mouldings has a selection of species that qualify toward the U.S. Green Building Council's LEED green building program. We also offer special-order products that can be manufactured specifically to meet LEED requirements.

We have been a leader in the Southeast in promoting products for green building standards. We source forest products, including lumber, veneer and plywood, from mills that ascribe to a variety of certification programs, including Forest Stewardship Council (FSC), Sustainable Forest Initiative (SFI), American Tree Farmer, and Programme for the Endorsement of Forest Certification (PEFC). As additional credible certification programs are developed, we will continue to evaluate and expand our offering of certified forest products. Regarding imported hardwoods and veneers, we actively support and abide by the principles of the Convention in International Trade with Endangered Species (CITES) and the Lacey Act recently passed by the US Congress which protects against illegal logging.

---

# MOULDING

---

All of our facilities have made a commitment to be environmentally conscious. Internally we have a green task force focused on recycling. All of our internal wood wastes generated by our moulding plant, planer mills, trim saws and wood dunnage materials are utilized as fuel to make steam for our dry kilns. Our warehouses have incorporated skylights and all of our plants have low maintenance native landscaping which does not require sprinklers. We recycle our office paper, steel banding and the waste oil in our maintenance shops. Our management encourages employee participation in and support of responsible environmental organizations and sustainable forest management. Additionally, we support numerous organizations which promote conservation and environmental stewardship, including The Trust for Public Land, Trees Atlanta, Hardwood Forest Foundation and Project Learning Tree.

We stand in awe of the wonders of Mother Nature and take seriously the vital role of sustainable forestry. Our future is linked to a healthy forest resource. So remember, when you think of wood, think of us.

# ARCHITECTURAL SERIES

# ARCHITECTURAL SERIES

Classic design. Modern innovation. Traditional applications. Unique perspective. Architects take brick and mortar, veneer and moulding and create works of art where there was nothing before.

At White County Mouldings, we recognize the value of the inspired talent that architects bring to the table. Our hardwood mouldings become more than a simple profile when interpreted by a skilled architect.

As part of our extensive offering of hardwood mouldings, we bring you the exquisite designs of highly recognized architects throughout the country. The featured architect in this edition of our moulding catalogue has created a series of moulding combinations that provides timeless examples of the use of moulding and veneer. These design samples are available for use by our moulding customers. You may also call upon the professionals in our sales group, should you choose to use alternative species or wish to add a custom profile to your own interpretation of these moulding combinations.

## About the Architect

### Norman Davenport Askins

Norman Askins has become well known throughout the United States, and especially in the South, as a modern interpreter of classic styles. He specializes in historic preservation, restoration, and residential design. Known for exacting quality and the authenticity of his details, including the use of proportions as a design element, Mr. Askins is a prominent leader in today's classical architectural movement in the South.

The Alabama native began his professional training with a Bachelor of Architecture degree from the Georgia Institute of Technology. From there, he went on to study at the University of Virginia, where he acquired a master's degree in architectural history. He also attended a session at Parsons School of Design in New York City and two sessions at the Attingham Park Summer School in Shropshire, England, where he studied architecture and decorative arts of Great Britain in both 1967 and 1993.

Following graduate school, Mr. Askins served a four-year apprenticeship with the Colonial Williamsburg Foundation, where he received in-depth training in early building technology and the philosophy of restoration. While at

Williamsburg, Mr. Askins was assigned to a year-long special project to redesign much of the interior of the executive office wing of the White House.

Following two years in Atlanta with Heery and Heery Architects, Mr. Askins accepted a position with John Milner Associates of West Chester, Pennsylvania, the nation's largest and foremost preservation and restoration firm. As director of restoration, he oversaw a wide variety of preservation projects in the Eastern and Southern regions of the United States.

In the fall of 1977, Mr. Askins established his own practice in Atlanta, Georgia. Over the past three decades, the firm has grown to include 10 architects and provides a scope of services that ranges from period residences to vacation cottages, plantations, and innumerable additions to existing homes.

In addition to his professional career, Mr. Askins has served with various arts and preservation organizations including positions as chairman, Friends of the Decorative Arts, High Museum;

# ARCHITECTURAL SERIES

---

board of governors, Rhodes Hall; board member, Cherokee Garden Library; and board member of the Southern Architecture Foundation.

In this edition of the White County Mouldings catalogue, Mr. Askins has provided his personal interpretation of five classic styles, including English, French, Federal, Georgian, and Greek Revival in a collection of combination moulding designs.

**English** – The English style of architecture dates back to the 16th and 17th centuries and is a mélange of Flemish, French and Italian Renaissance influences. Characteristics of the style include an emphasis on symmetry, proportion, geometry and the regularity of parts, although many of the characteristics of the Tudor style can also be seen. Designs are square and symmetrical in appearance and include mouldings that stand out around doors and windows.

**Federal** – The Federal style was popular along the Atlantic coast from 1780 to 1830 and continues to be one of the most popular styles in the country today. Characteristics of the Federal style include shallow arches, slender proportions, delicate decoration, and symmetry with entrances often framed by columns and pediments. One of the best-known examples of federal style is the University of Virginia designed by Thomas Jefferson.

**French** – An eclectic evolution of styles, the French style of the mid to late 1800s is considered a modern style and one of the first not based on a historical style. This style embodies classical influences and shares many of the same features as Italianate, with an understated but regal appearance. It is considered an expression of great individuality, subtlety, and complexity. Prominent American examples of this sophisticated style include the state, war and navy buildings in Washington, D.C.

**Georgian** – Modeled after the more elaborate homes of England, the Georgian style dominated the British colonies throughout New England and the South during the 1700s. The style is characterized by proportion and balance and is prominent in 21st century architecture throughout the United States.

According to Mr. Askins, “The style is simple, rational, and easy on the eyes.”

**Greek Revival** – The Greek Revival style dominated residential and public architecture for much of the mid-19th century and became the most predominant housing style in the United States, especially in the Southern states. It became so popular, it was known as the “National Style.” The American Greek Revival style incorporates bold, simple mouldings, tall ceilings and floor-length windows and is easily adapted to the finest mansions or the simplest farm houses.

# BASE MOULDING

# BASE MOULDING

You can see our decades of manufacturing expertise and craftsmanship in every base moulding we produce, from the simplest quarter-round, to the most elegant, custom-designed base board. Base mouldings provide a polished, expertly finished design element for floors constructed from virtually any material, from hardwoods, to stone, to vinyl or carpet.

Our collection of base mouldings includes:

- Base Boards
- Base Caps
- Shoe & Quarter-Round

Base caps, shoes and quarter-rounds may also be used in built-up moulding combinations or as caps and simple finishing elements for chair rail installations.

Rest assured that our hardwood base mouldings will add beauty and style to every installation. When you choose our moulding products you have the advantage of high-quality hardwoods combined with meticulous manufacturing standards.

# CASINGS & WINDOW TRIM

# CASINGS & WINDOW TRIM

Casings and window trim are used to provide a polished, finished appearance for windows, doors and other openings. From the simplest, everyday door casings and window trim to the most elaborate custom doorway designs, you can rely on White County Mouldings for the timeless style and craftsmanship of beautiful hardwood mouldings. Whether your next project is a custom recreation of a traditional Savannah brownstone or a sleek, upscale retail establishment, you'll find a wide variety of profiles for casings and window trim. Choose from the popular profiles featured in our catalogue or talk with one of our associates in our sales group to find the species and custom design that add unique personality to your next project.

Our selection of profiles includes:

- Apron
- Backband
- Brick Mould
- Casings
- Plinth
- Stool & Stop

Our hardwood mouldings are planed at exceptionally high speeds and are ready to stain, seal or polish. Finger-jointed, paint-grade and veneer-wrapped mouldings are also available in a variety of profiles.

# CROWN MOULDING

# CROWN MOULDING

The mark of  
responsible forestry

FSC® C068144

Fine architectural mouldings truly are the crowning focal point of many residential and commercial projects. Used to embellish the joint between the wall and the ceiling, crown moulding is also a popular trim for cabinet tops, mantels and window headers. While we offer one of the broadest selections of crown mouldings in the Southeast, we encourage you to investigate our custom capabilities to create your own, unique interpretation of crown moulding.

Each profile is manufactured to exacting standards from the finest kiln-dried hardwoods. From cherry and oak, to African mahogany and maple, we offer one of the largest selections of species available in the Southeast. Our extensive collection of moulding profiles makes it easy to achieve a custom look, from the simplest job to the most inspired application.

Our sales group is a skilled group of professionals who will work with you throughout the design process and is available to assist you in sourcing unusual products, including extra-wide crown profiles and exotic species. You'll find that White County Mouldings is a ready resource for the finest quality hardwood mouldings.

# FLOORING & ACCESSORIES

# FLOORING & ACCESSORIES

The hardwoods for our hardwood flooring and flooring accessories are carefully selected for their extraordinary beauty and characteristics and sourced only from the highest quality timber from the Appalachians and around the world.

We specialize in unfinished plank flooring, three to eight inches wide and three to 16 feet long. Wider and longer plank flooring is available in some (old growth) species, such as French oak. Custom flooring is available in more than 30 different species. Along with our hardwood flooring, we also offer one of the highest quality engineered flooring products available on the market today, featuring a 1/4-inch hardwood surface. This hardwood top layer, which is two to three times the thickness of many popular engineered flooring products, is comparable to the lifetime wear of a solid hardwood product.

Our hardwood flooring profile collection includes the following:

- Flooring
- Nosing
- Reducers
- Thresholds

# HANDRAIL & STAIR TRIM

# HANDRAIL & STAIR TRIM

Stairways are more than a means to travel from floor to floor. For a beautifully finished installation, you'll want handrail and stair trim in classic, durable hardwood. Our extensive species selection means that you can find mouldings, handrail and stair trim to make your vision come to life. Whether creating a contemporary, dramatic stairway for a commercial installation or a traditional, elegant stairway for a charming residential home, you'll want precision-cut mouldings manufactured from the highest-quality kiln-dried hardwoods.

Our handrail and stair trim profiles include:

- Handrail
- Coves & Scotia
- Wall Cap
- Step Tread

Choose from a selection of profiles or talk with one of the professionals in our sales group for custom designs.

# MISCELLANEOUS MOULDING

# MISCELLANEOUS MOULDING

The mark of  
responsible forestry  
FSC® C068144

Our dedication and commitment to excellence is visible in even the simplest trim mouldings. These are the details that distinguish a home or commercial establishment and give them their personality and visual appeal. Whether pencil mould or an elaborate custom-designed picture mould, each profile is cut with care from the finest kiln-dried hardwoods. Our precise milling technology allows us to provide our customers with the best quality millwork in the Southeast. We offer a wide selection of trim profiles in virtually any species to ensure that you can finish each project down to the minutest detail with expertly matched hardwoods.

Our collection of miscellaneous moulding and trim profiles includes:

- Bar Rail
- T-Astragal
- Cabinet Moulding
- Drapery Rods
- Drip Cap
- Full-, Half- & Quarter-Rounds
- Outside Corners
- Picture Mould
- Shutter Parts

# VENEER-WRAPPED MOULDING

# VENEER - WRAPPED MOULDING

In addition to the hundreds of hardwood profiles we offer, we also offer a veneer-wrapped alternative to traditional hardwood moulding. Our goal is to provide profile and species options to meet even your most ambitious architectural and design needs, including innovative, technologically advanced products, such as veneer-wrapped mouldings.

Our natural wood veneer-wrapped mouldings and jambs consist of clear grain, real wood veneer laminated to a variety of substrates, including aluminum, MDF, vinyl, LVL and finger-jointed pine. They're available in virtually any species of hardwood veneer, including traditional choices such as cherry, maple, mahogany and oak, as well as more exotic species, such as khaya, teak and makore.

You'll find exceptional craftsmanship in these moulding products, regardless of the substrate. And a custom manufacturing process means that there is virtually no limit to the designs you can create. Available in up to 16-foot lengths, it's easy to spec even the most complex projects with less waste.

## Veneer-Wrapped Moulding from Contact Industries

Your selection of stylish architectural millwork is virtually limitless when you choose veneer-wrapped mouldings from Contact Industries. We are the exclusive Southeast distributor of this inventive product line, which is designed to provide all the beauty and appeal of solid hardwood moulding, but with customized options that aren't always available with traditional hardwood profiles.

Contact Industries has provided exceptional products and customer service since 1946. By utilizing state-of-the-art manufacturing practices and adhering to the highest quality standards in the industry, Contact Industries has earned recognition as a leader in profile veneer wrapping, flat veneer lamination and pre-finish technology. Additionally, Contact Industries is FSC-certified for chain of custody and is ISO 9000-2008 certified.

These technologically-advanced moulding products are produced by wrapping a dimensionally stable substrate in defect-free, real wood veneer with color uniformity

the full length. Veneer-wrapped mouldings are available in virtually any profile up to 10" wide and 16' long, and are designed to be used just as you would use any moulding profile. They can be combined for built-up moulding applications, or used in traditional applications, such as single-profile base or crown. With light-weight substrates and long, uniform lengths, veneer-wrapped moulding can be easier and less costly to install than traditional mouldings. More than 70

percent of Contact Industries veneer-wrapped products are custom-engineered to meet the exact specifications of our customers. Additionally, all veneer-wrapped products can be cut to exact specifications to suit each individual job, eliminating waste. The entire job can be pre-cut and delivered to the job site for faster installation and virtually no cutting on site. Our entire selection of veneer-wrapped products can be pre-finished with stain and/or top coat with an environmentally-friendly UV cure.

In addition to hardwood-wrapped veneer mouldings, mouldings wrapped in wood-look-alike vinyl films and reconstituted veneers are also available.

## A Royal Match

*King's is one of the University of London's oldest and largest colleges and is located in the heart of London on the River Thames.*

College is for shedding light on a world of thought and ideas. This is the rare case of a university doing so both literally and figuratively. When King's College in London needed window coverings during a recent remodel, they turned to their OEM, Taylormade Joinery in Suffolk. In looking for a dimensionally stable, fire-rated, long lasting and, most importantly, aesthetically pleasing solution, their product distributor, Timbmet Silverman in Oxford, knew just who to turn to next: Contact Industries.

Contact was able to meet the needs of King's College by providing 1,210 pieces of aluminum wrapped with a white oak veneer, which is 92,503 total lineal feet of vertical blinds. Now the windows at King's College not only shed light literally when needed, they also shed light figuratively on the versatility and practicality of Contact's products. Which truly is a royal match.

# VENEER-WRAPPED MOULDING

Case Study No. 05 - King's College

## PROJECT PROFILE

**PROJECT:** King's College, London, UK

**Client:** Taylormade Joinery

**Details:** 1,210 pieces of vertical window blinds totaling 92,503 lineal feet:  
- 594 at 63½"  
- 274 at 74½"  
- 342 at 100½"

**PRODUCT:** Wood-wrapped window louvers

**Construction:** White oak veneer over extruded aluminum

**Adhesive:** Type I Hot Melt

**Test procedures:** Boil test

**End use:** Vertical window blinds

**Core:** Aluminum

**Face veneer(s):** White oak

### Contact Industries' Custom Wrapped Components

Contact's innovations in veneer wrapping technology allow the company to creatively engineer products that combine the look of real wood with the performance attributes of other materials. The following materials are available when custom engineering a component with Contact:

**Substrate:** Virtually any material, including fingerjointed pine, LVL, MDF, extruded aluminum, or PVC. Substrates are extruded or edge-glued and profiled prior to wrapping. A variety of treatment options are available for wood substrates.

**Veneer:** Any wood species, including oak, cherry, maple, fir, alder, and a wide variety of exotics. In addition to real wood veneers, Contact also wraps vinyl film and printed or infused papers. Veneers are fleece-backed; standard thickness is .024".

**Finish:** Prefinishing available in stain and/or topcoat per customer's specifications.

**Size:** Profiles can be up to 10" wide and 14-foot or 16-foot lengths (even 18-footers on request).

Much of what we've accomplished has been in reaction to a customer request. Have an idea in mind? Call us at 800.547.1038.

## Bank Approved

*Westsound Bank is located in Sequim, Washington, nestled along the picturesque Strait of Juan de Fuca at the northern end of the Olympic Peninsula.*

When it comes to scrutinizing finances, you can count on banks to be thorough. This case is no exception. Architects for Washington's Westsound Bank specified warm, inviting cherry hardwood ceilings. Luckily, the contractor's construction superintendent recalled an ad for wood paneling that could deliver on both appearance and cost. That's when Contact Industries got the call.

Contact's tongue and groove veneer-wrapped paneling was ideal for the job. Not only did the architects achieve the atmosphere they desired, the builders benefited from the clear, consistent and easy-to-install 16-foot panel lengths. As for the bank president, there was only one thing to say about Contact's lower overall installed cost: approved.

## PROJECT PROFILE

### PROJECT: Westsound Bank, Sequim, WA

Client: Edensaw Woods  
Details: 207 pieces at 198"  
57 pieces at 123"  
4,000 total lineal feet

### PRODUCT: Wood-wrapped T&G paneling

Construction: 1"x6" fingerjoint pine core with cherry hardwood veneer  
Adhesive: Type 1 Hot Melt  
Test procedures: Boil test  
End use: Ceiling  
Core: Finger-jointed pine  
Face veneer: Cherry

### Contact Industries' Custom Profile-wrapped Products

Contact offers a full range of profile-wrapped solutions for a wide variety of industries. These include: architectural mouldings; window components; door jambs, stiles and rails; as well as a variety of components for fixture and cabinet manufacturers. Many of these products are custom-designed to meet the specific requirements or requests of the customer. Specifications for Contact's wrapped products:

**Substrate:** Virtually any material, including finger-jointed pine, LVL, MDF, extruded aluminum, or PVC. Substrates are extruded or edge-glued and profiled prior to wrapping.

**Veneer:** Any wood species, including oak, cherry, maple, fir, alder, and a wide variety of exotics. Veneers are fleece-backed; standard thickness is .024". Vinyl, stainable or finished, and impregnated cellulose (film), printed to look indistinguishable from real wood, are also available.

**Size:** Up to 10" wide and 16' lengths (18-footers on request).

**Finishing:** Wood veneers can be pre-finished with stain and/or top coat and an environmentally friendly UV cure.

Some standard moulding profiles are sold through distribution.

## Hawaiian Style

*Wai'ula'ula at Mauna Kea Resort is an upscale residential development featuring the Arnold Palmer designed Hapuna Golf Course and overlooking the Kohala Gold Coast on the Big Island of Hawaii.*

In the midst of lush, tropical rainforests, picturesque hillside coffee farms, and towering dormant volcanoes there is one place that stands above them all: the Kohala Gold Coast. Overlooking its white sand beaches is the island-influenced Wai'ula'ula, an exclusive housing development featuring 47 acres of Hawaiian luxury comprised of condos, estates, hotel facilities, restaurants, spas and fitness centers. In looking for a supplier of clear, defect-free trim and moulding in a variety of profiles, Honsador Lumber went to Contact.

Contact Industries' products not only delivered lower installed costs and higher performance standards, they came prefinished with a high quality stain and topcoat, providing consistent color and style throughout the extensive project. In total, eight shipments with roughly 70,000 lineal feet of Khaya-wrapped mouldings, jambs, casings and trim in five different profiles were delivered to the Big Island site. The result is pure Hawaiian style living.

## PROJECT PROFILE

### PROJECT: Wai'ula'ula at Mauna Kea Resort, Hawaii

Client: Maryl Pacific Construction  
Details: 47 beachfront acres  
102 condominiums plus a mix of estates, hotels, restaurants, spas and fitness centers  
\$3.3 million per unit sales price  
Five prefinished moulding and jamb profiles  
Eight cargo shipments

### PRODUCT: Prefinished wood-wrapped trim and mouldings

Construction: Fingerjointed pine core with Khaya veneer  
Adhesive: Type I Hot Melt  
Test procedures: Boil test  
End use: Mouldings, jams, casing & trim  
Face veneer(s): Khaya (African Mahogany)  
Finish: Stain and topcoat

### Contact Industries' Natural Wood-wrapped Mouldings

Contact offers over 4000 signature profiles, the WM series, and also specializes in custom-designed mouldings to meet the specific requirements or requests of a particular customer. All Contact mouldings are available in 14-foot or 16-foot lengths (even 18-footers on request), packaged and ready for easy installation with no pre-drilling necessary. The dimensionally stable fingerjointed substrate is wrapped with defect-free, real wood veneer providing color uniformity the full length. Mouldings are available in virtually any profile up to 10" wide.

Standard specifications for wood-wrapped mouldings are:

Substrate: Standard substrate is fingerjointed pine. However, Contact Industries can wrap virtually any material, including LVL, MDF, extruded aluminum, and PVC. Substrates are extruded or edge-glued and profiled prior to wrapping.  
Veneer: Any wood species, including oak, cherry, maple, fir, alder, and a wide variety of exotics. Veneers are fleece-backed; standard thickness is .024".  
Finish: Prefinishing available in stain and/or topcoat per customer's specifications.

Some standard moulding profiles are sold through distribution.

### FUNCTION, MEET FORM.

The new fire-rated door frame from Contact Industries allows architects and contractors to comply with the strictest of fire ratings without compromising aesthetics. Contact's innovative technologies can wrap frames in a virtually unlimited assortment of hardwood and softwood veneers, as well as paint-grade and high pressure laminates, to match doors, casings and interior trim.

The frame's unique composite design incorporates intumescent material directly into the frame itself, offering significant cost savings while maintaining the wall system's ability to achieve the necessary fire rating. Frames are capable of meeting US and UK standards for fire ratings up to 120 minutes, and are available in single- or double-rabbit for single and double openings, as well as communicator frames.

# VENEER-WRAPPED MOULDING

## Features and Benefits:

- Patented frame composition; fire-rated up to 120 minutes
- No special fillers or joint compound required to maintain fire rating
- Can be used with positive pressure or neutral pressure tested doors and hardware
- Available in paint grade, high-pressure laminate or wood veneer
- Available with factory applied stains and topcoats, including UV finishing. Versatile finishes allow frames to match entire millwork package.
- Can match virtually any wood veneer species
- Adjustable clip anchorage simplifies installation; no exposed fasteners
- Available as a single-rabbet, double-rabbet, or communicator frame

# INDEX

# I N D E X

We've provided a dual index to make it as easy as possible to find the type and size moulding that is ideal for your project. Moulding profiles are indexed in the first section by dimension and type of profile. This area of the index is provided to help you select mouldings by dimensions that match the space you are designing. The second section of the index lists moulding profiles by profile number. This allows you to locate profiles quickly that are easily recognized by number.

Should you need a moulding profile that is not listed in our catalogue, please feel free to talk with a member of our sales group to develop a custom profile or moulding combination that will meet your design specifications. Custom profiles are subject to minimum orders.

## Associations and Affiliations

White County Mouldings is an active and proud member of America's leading lumber associations:

National Hardwood Lumber Association

Southern Cypress  
Manufacturers Association

Wood Component  
Manufacturers Association
